

30kW outdoor unit for wastewater treatment plant Copenhagen

The oldest and largest pumping station in Denmark has been discontinued and replaced by a new one. The new wastewater pumping station is designed for climate changes and with the environment in ...

It is divided into two separate pumping stations with two sumps. This allows for maintenance on one unit at a time and provides an increased operational reliability. Only when it rains, both units will be ...

BIOFOS is Denmark's largest wastewater utility, treating the wastewater from 1.2 million inhabitants in the Copenhagen metropolitan area.

In order to reduce the impact on these plants, we are working on several retention and pretreatment projects. We also provide solutions to prevent harmful substances and wastewater from hospitals, ...

Lynetten, the largest sewage treatment plant in Denmark, treats industrial and municipal waste water of 1.1 million PE, corresponding to 3.2 million liters of waste water every day. The waste water ...

This tour will take you to Ejby Mølle or Sønderø WWTP. Here you can explore a state-of-the-art water resource recovery facility with very high standards for wastewater treatment.

Denmark's largest wastewater utility, BIOFOS, handles the Damhusøen wastewater treatment plant, which transports its biosolids to sister facilities with incinerators.

Utilities everywhere can take inspiration from Copenhagen's wastewater treatment, where in-house researchers are reducing greenhouse gas emissions, and contributing to the circular economy by ...

Lynetten Wastewater Treatment Plant is Denmark's largest sewage treatment facility located on Refshaleøen in Copenhagen. It is a central purification plant that treats wastewater from ...
