

The Major Solar Projects List is a database of all ground-mounted solar projects, 1 MW and above, that are either operating, under construction or under development.

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...

Solar developers need land for utility-scale and community solar projects. But what are those? For that matter, what are residential and commercial solar projects? There are four general types of solar ...

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated distributed (<1 ...

Solar projects are making it easier for Americans to choose solar energy to power their homes. Since 2008, hundreds of thousands of solar panels have been installed across the country as more and ...

Miles-long rows of solar panels humming under the desert sun, powering whole regions. This list cuts through the noise, ambitious announcements, and glaring projections. What follows are ...

Solar projects range from large-scale power plants to small, community-based systems, each playing a crucial role in the transition to a more sustainable energy future.

As part of our Solar 101 series, here's everything you need to know about the three main types of solar energy projects for your corporate renewable energy procurement.

There are currently three main types of panels in today's market which includes monocrystalline, polycrystalline and thin film panels. Here are the details of each: Monocrystalline ...

Solar energy is the radiation from the Sun capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy received on Earth is vastly more ...
