

Hungary's transition is advancing - driven above all by solar - lifting renewables' GFC share to 17.4% (2023) and targeting $\geq 30\%$ by 2030, alongside a coal exit aligned with the Mátra ...

Hungary anticipates significant investments in the electricity sector, including the construction of a new nuclear power plant. Although renewable energy generation has expanded ...

In 2024, it overtook gas to become the second-largest source of electricity, after nuclear. Coal power has been largely displaced, first by gas and now by solar. This has helped cut the ...

Hungary's largest operating standalone battery energy storage system (BESS) has been inaugurated today: MET Group put into operation a battery electricity storage plant with total nominal ...

The analyses focus on the cooperation of nuclear power and weather-dependent renewables, and on the possible role that battery-based electricity storage can play in the Hungarian ...

Hungary's transition to clean energy can enable it to achieve greater energy security and independence as it navigates the supply challenges that Russia's invasion of Ukraine has created for ...

Let's start with the fundamentals: Hungary will need significant additional power plant and battery capacities, and it will need them soon. This necessity persists despite the gross amount of ...

MAVIR, the Hungarian TSO, put into operation a battery energy storage system (BESS) of 20 MW in capability and a three-hour cycle.

Hungary has just switched on its largest battery energy storage system (BESS) to date, stepping up its role in Central Europe's growing grid-scale energy transition.

New Hungarian nuclear units decrease the CO₂ emissions of electricity generation and don't limit market conditions of renewables. Batteries lack profit on price-arbitrage basis, thus their ...
