

# Bangkok liquid cooling energy storage construction

SP Group (SP) and Banpu NEXT announced they have won the tender to design, build, own and operate an innovative district cooling system at Government Complex Center Zone C in ...

A new 2-MW data center in the heart of Bangkok's business district could be powered by regasified liquid natural gas (LNG) to create district cooling energy in its version of a lower-carbon...

Liquid Jun 21, 2024&ensp;& #0183;&ensp;Explore cutting-edge liquid-cooled energy storage solutions for optimized cooling technology and efficiency. Alongside the launch of our C& I Hybrid-cooling ESS--a ...

Advanced energy storage solutions, including thermal energy storage (TES) systems and phase change materials (PCMs), have been explored to enhance the efficiency and reliability of ...

This showcase highlights the advanced cooling technologies already in use at the facility, which has recently achieved certification in the NVIDIA DGX-Ready Data Center programme and ...

It will design, build, own and operate the centralised cooling system to provide reliable and energy-efficient chilled water to the network of buildings within the complex and install an EV ...

A prime mixed-use development in Bangkok aimed to achieve one of the best chiller plant efficiencies in Thailand, targeting an energy consumption rate lower than 0.55 kW/RT. This ambitious goal required ...

Southeast Asia's liquid cooling energy storage sector presents significant opportunities for companies offering climate-adapted solutions. With renewable energy targets driving demand and technological ...

A new 2-MW data center in the heart of Bangkok's business district could be powered by regasified liquid natural gas (LNG) to create district cooling energy in its version of a lower-carbon microgrid.

A District Cooling System (DCS) distributes chilled water from a central plant to building individually through a network of underground pipes to use in space and process cooling.
