

China's low-cost solar panels are helping to light rural Zimbabwean communities, while Chinese EVs, which are affordable, clean transportation choices on city streets from Mexico to ...

China also dominates when it comes to building new solar PV plants, adding 34.5GW last year. This accounted for 46% of all new solar power plants across the planet in 2016. While a second ...

Global renewable energy capacity grew by 15.1% in 2024, largely driven by solar. Yet a growth rate of at least 16.6% must be maintained to reach targets of tripling renewable energy ...

Yet solar power capacity is forecast to overtake coal this year, according to the China Electricity Council, demonstrating China's breakneck addition of clean power: Overall, wind, solar, ...

Now technically and economically viable, space-based solar power (SBSP) could be a new abundant sustainable energy source.

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

The global demand for solar power is rising worldwide. China provides the bulk of solar power component parts. Solar power can solve the energy trilemma of energy security, affordability ...

China's solar and wind operating capacity has soared to 1.4 TW and now accounts for 44% of the world's operating utility-scale solar and wind capacity, more than ...

Representational image/Pixabay China's solar power sector is bracing for a sharp slowdown in new installations in 2026 after a major policy overhaul last year altered how renewable ...

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility ...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

China's approach to renewable energy buildout combines large-scale investment, technological innovation and

market reform. China is installing more renewables than any other ...

China's industrial and commercial energy storage is poised for robust growth after showing great market potential in 2023, yet critical challenges remain.

China is set to have more solar power capacity than coal for the first time this year, marking a "historic" milestone in the country's energy transition.

Today, China invests more each year in wind, hydro and solar power than any other country on earth. This week it further underlined its role as the global leader in renewable energy by ...
