

West Virginia has a timely opportunity to build on its legacy as a domestic energy provider for the 21st century by capitalizing on the vast land base of former surface coal mines as sites for ...

The challenging terrain of a former coal mine waste site in Pennsylvania called for an innovative tracking system in order to build a solar power installation on the land.

Repurposing abandoned coal mines into solar energy facilities could boost global solar capacity by an impressive 300 gigawatts (GW), equivalent to roughly 15% of current global capacity, according to a ...

17 former coal mines in the US are being transformed into clean energy hubs, featuring 14 solar farms and three battery storage sites.

Across the U.S., former coal mines and power plants are becoming fertile ground for renewable energy projects like wind, solar, and battery storage.

Recently shuttered coal mines around the world can have new life as solar farms, potentially adding nearly 300 gigawatts (GW) of clean energy by 2030, a first-of-its-kind analysis by ...

An innovative approach gaining traction is the conversion of decommissioned coal mines into solar energy farms. This strategy not only addresses the challenges of land availability for ...

US organizations are coming together to deploy solar power systems at former coal power plants and mines, boosting coal-to-solar conversions.

Turning old coal mines into solar farms goes beyond clean power or paychecks -- it's also a way to heal the land and address the emissions that coal left behind.

Abandoned surface coal mines worldwide are emerging as prime candidates for large-scale solar energy development. According to research by Global Energy Monitor...
