

Are data center rack enclosures a commodity product?

At one time, data center rack enclosures and related equipment were considered commodity products—simply a platform to stack equipment, with more enclosures purchased as servers and rackmount equipment were added to the IT inventory.

How many kW does a data center rack need?

12 kW per rack by 2014, according to data collected by the Data Center Users Group, sponsored by Vertiv™. The need now exists for taller, wider and deeper racks to accommodate the changes in IT equipment and densities. As data center managers strive to make use of valuable space, racks are more fully filled than ever.

What size rack should a data center have?

Taller racks, beyond the common 47U (2200 mm) are also becoming more popular as data centers with room to expand vertically take advantage of headroom. The depth of rack-mounted equipment is also increasing. For example, the greatest server depth requirements in the past resulted in a rack depth of 1200 mm.

Why do data centers need a high density server?

Today, data centers are 24/7/365 mission-critical systems. Growing business demands put pressure on data centers to provide ever more processing power and data storage. New generations of high density servers and networking equipment have increased rack densities and overall facility power requirements.

Delta InfraSuite Datacenter management system featuring modular racks and accessories for customizing datacenters for mission critical applications.

GETEKnet provides ODM / OEM manufacturing of data center infrastructure products, including server racks, PDUs, cable managements, and intelligent integrated systems for modular data centers.
