

Beyond batteries and pumped storage hydropower, the EU ranks second, after the U.S., in the number of companies developing novel energy storage technologies and leads in liquid air ...

Europe's ambition to become a global hub for energy storage system (ESS) manufacturing is facing a sobering reality check.

But beyond the numbers, the big question remains whether Europe can accelerate fast enough to ensure a resilient, competitive, and above all, decarbonised power system. The clock on ...

European Energy works actively to implement battery storage in our renewable energy projects. Our battery storage projects are primarily co-located, meaning a regular renewable energy park is ...

Discover how grid-scale energy storage is reshaping Europe's power system for a cleaner, flexible future.

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity ...

In 2025, Europe's battery storage market entered a new phase of scale and maturity. With 27.1 GWh of new capacity installed, the European Union achieved its 12th consecutive record ...

New analysis reveals another year of record installations for European battery storage, despite slower year-on-year growth, according to the latest European Market Outlook for Battery ...

Battery energy storage in Europe is key to renewable integration and grid stability, requiring tailored risk management and insurance strategies for growth.
