

Georgia Power is taking a significant step towards modernizing its energy infrastructure by introducing 500 megawatts (MW) of new Battery Energy Storage Systems (BESS).

Georgia Power announced today that construction is underway on 765 megawatts (MW) of new battery energy storage systems (BESS).

Storage systems can improve the efficiency of renewable energy by storing excess energy produced during periods when the demand for electricity is lower, for use when the demand is ...

The first such project Georgia Power contracted for, Hickory Park, is a 196MW solar PV plant paired with 40MW/80MWh of battery storage, which went into commercial operation in June ...

This setup allows Georgia Power to use existing infrastructure, reducing costs and avoiding lengthy construction timelines. The project is being handled by Burns & McDonnell and is ...

Included in the request are power purchase agreements (PPAs) from existing resources, as well as new, company-owned natural gas generation, battery energy storage system (BESS) and ...

Georgia Power is implementing 500 MW of battery storage systems to enhance the reliability of Georgia's electric grid, in line with the Georgia Public Service Commission's approved 2023 ...

Because battery storage can provide stored energy to the grid over several hours, BESS resources can also rapidly respond to other system events to increase the reliability of the electric system.

The Georgetown Energy Storage Project continues to make waves in renewable energy integration, achieving 92% operational efficiency in its latest phase. As cities worldwide seek sustainable power ...

The Mossy Branch Battery Facility is capable of 65 megawatts (MW) of battery storage that can be deployed back to the grid over a four-hour period, adding resiliency to the state's power ...
