

The article synthesizes current research findings and technological innovations in renewable energy, focusing on improvements in efficiency energy storage solutions and integrating ...

On July 15, the inauguration ceremony of Shanghai Electric New Energy Development Co., Ltd. was held in Shanghai. The new energy strategy of Shanghai Electric Group was released on the spot, ...

Green and sustainable electrochemical energy storage (EES) devices are critical for addressing the problem of limited energy resources and environmental pollution.

Bioenergy with Carbon Capture and Storage (BECCS) combines bioenergy (BE) production with carbon capture and storage (CCS). Not only does this generate renewable energy, ...

After the project is completed, it can achieve a renewable energy utilization rate of 29%, more than 75% of green energy heating throughout the year, meet about 29% of the clean and stable heating load in ...

Shortages in critical raw materials, environmental impact, energy loss, and costs are some of the challenges to large-scale deployment. The blue economy promises opportunities for ...

As the world grapples with the urgent need to reduce greenhouse gas emissions, carbon capture and storage (CCS) has emerged as one of the critical decarbonisation pathways on the journey towards ...

This report demonstrates what we can do with our industry partners to advance innovative long duration energy storage technologies that will shape our future--from batteries to hydrogen, supercapacitors, ...

Shanghai Electric, a leading global integrated manufacturer of high-end equipment, has been building new comprehensive power systems and a complete solution for futuristic zero-carbon...

This Special Issue, "Advanced Technologies for Sustainable and Low-Carbon Energy Solutions", aims to explore cutting-edge technological innovations and strategies that are reshaping the global energy ...
