

The project provides Washington state with its first opportunity to integrate a large-scale solar and storage facility into its clean mix of hydro, nuclear, and wind resources. This first-of-its-kind ...

The project also includes a 1-MW/4MWh battery energy storage system and serves as a training ground for solar and battery technicians throughout the nation. The combination of photovoltaic solar with ...

Construction work has started on a \$6.5 million project that will include a 4-megawatt solar generating array and a 1-megawatt battery energy storage system in north Richland. The ...

Washington State's first utility-scale solar and battery project powered up in north Richland this week. With more than 11,400 new solar panels, paired with battery storage, the Horn ...

In part one of our three-part series, our experts cover the site layout elements and requirements that can impact a BESS project.

The facility combines solar generation with battery storage and technician training. The 20-acre project provides 4 megawatts of direct-current electricity -- enough energy to power 600 ...

BESS can store energy from various sources such as the electrical grid and renewables. By storing energy from the grid during off-peak periods when electricity rates are lower, BESS can discharge ...

Housed on the north outskirts of Richland, Washington, the Horn Rapids Solar, Storage and Training project is the state's first utility-scale solar and battery site.

This report documents the techno-economic assessment of the integrated system, including the definition of use cases and applications, collection and preparation of data and input ...

The Horn Rapids Solar, Storage & Training Project is one of the first utility-scale solar and storage projects in Washington state. It will provide the state the opportunity to integrate another clean ...
