Are three-phase smart inverters suitable for grid-connected photovoltaic system?

The main purpose of this paper is to conduct design and implementation on three-phase smart inverters of the grid-connected photovoltaic system, which contains maximum power point tracking (MPPT) and smart inverter with real power and reactive power regulation for the photovoltaic module arrays (PVMA).

What is the output voltage of a photovoltaic smart inverter?

Regarding research and development (R&D) of the photovoltaic smart inverter, the inverter researched and manufactured as per this paper was specified with input DC voltage at 400 V, output AC voltage at the root-mean-square value of 220 V, and sine wave at a frequency of 60 Hz. 3.1.

What happens when a photovoltaic smart inverter starts voltage-power control?

When the photovoltaic smart inverter starts voltage-power control, should the mains voltage and frequency still fail in steady parallel operation and exceed the normal range, it must automatically trip to avoid damage. Figure 9 displays the reactive power control architecture for the smart inverter.

Can a photovoltaic smart inverter connect with the mains system?

From the results of the simulation and actual test, it proves that the photovoltaic smart inverter developed in this paper can connect with the mains system. Through the voltage-power regulation, the smart inverter can absorb or provide reactive power in the mains, where the voltage quality of the mains supply is improved further.
