

In this area you can download ITRack documentation in Italian or English languages containing necessary information for the Customers' business and the development of projects.

The new design of data centers, industries and control rooms implies that servers being used need to be increasingly efficient. Over time the need for thermal loads is increased due to their power.

Standard rack mount structure fully compatible with server rack is flexible for future expansion. Precision cooling controller monitors and protects unit constantly. Easy to be integrated into BMS to display, control and ...

Discover our rack cooling solutions, that will ensure the IT assets in your server racks only need to face the increased demand in data, not increased temperature. And let's make sure that the thermal management ...

the data center thermal environment may affect power distribution equipment. This paper also provides an overview of data center power distribution [2] [3] and describes the typical power.

It's a modular, autonomous, safe, costeffective and portable system made up of server cabinets with typical Data Center features, including the following components: cooling systems, UPS, Smart PDU, monitoring ...

Passive heat removal solutions help you remove heat from your racks and your data center without introducing additional energy costs. You can use a simple, straightforward version of passive heat removal to cool a ...

View the technical guide for deploying liquid cooling in the data center. Enabling high density deployments in a minimal footprint with rack solutions up to 80kW. Integrated controls and system visibility for the entire ...

Higher data transfer speeds, low latency, and constant availability require more computing power, which in turn means higher power densities per rack. For your unique performance requirements to be achieved, the ...

Leading Italian manufacturer of " Rack Cabinets for the Electronics, Telecommunications and Data Transmission sectors.
