

The biggest difference from traditional glass-film modules lies in the construction: glass-glass modules consist of two durable glass layers that surround the solar cells on both sides.

Available in Choice of 12 Solid or Semi-transparent Colour Options and customised pattern design print matched PV Cells, Foils & Glass to harmonise with Architectural Building Designs and Backgrounds.

Glass/Glass modules withstand air and moisture and offer best cell protection, while plastic backsheets of glass/foil modules become porous. The Glass/Glass composite protects solar cells against micro ...

Crafted with heat-treated safety glass, our photovoltaic glass provides the same thermal and sound insulation as traditional options, flooding spaces with natural light. Perfect for facades, curtain walls, ...

Explore premium solar glass, aluminium framing, and precision fabrication for energy-efficient architecture and infrastructure in the UK.

In temperate regions, it can be used to balance solar control with high levels of natural light. Solar control glass can be specified for any situation where excessive solar heat gain is likely to be an ...

Double-glass modules boast increased reliability, especially for utility scale PV projects. These include better resistance to higher temperatures, humidity and UV conditions and have better mechanical ...

This guide provides a comprehensive overview of what solar module glass is, how it works, how it is manufactured, what performance standards it must meet, and how users can ...

Let the light in with Mitrex Solar Glass -- a powerhouse in disguise, where photovoltaics meet limitless design, where color meets clarity. You're not just choosing glass; you're choosing a future where ...

Our solar cells are enclosed within a composite of two layers of foil and thermally tempered glass. This ensures that they can withstand hail and heavy snow (up to 12 kPa of static load on the front face).
