

How much solar power will Croatia have by 2030?

The Croatian government has set an ambitious target to reach 2.5 GW of installed solar capacity by 2030, a goal that would significantly contribute to the country's renewable energy mix. This target also aligns with the European Union's broader objective of increasing the share of renewables in electricity generation.

How much energy will Croatia have in 2024?

The report also projects that total capacity could reach 1.5 GW by 2025 and 2.5 GW by 2030. Data from the Croatian Energy Regulatory Agency (HERA) confirms this trend, with installed capacity reaching 902 MW by the end of September 2024. This marks a substantial increase from the previous year, as 243 MW of new capacity was added in 2024 alone.

How will solar power impact Croatia's Economy?

The growth of solar power in Croatia is also set to create new economic opportunities. The renewable energy sector can generate jobs in manufacturing, installation, and maintenance of solar power systems, while increased use of solar power can lead to cost savings for consumers and businesses by reducing electricity bills.

Why is Croatia's solar market growing so fast?

A key factor driving this growth is the government's commitment to a favorable investment climate, offering incentives like feed-in tariffs, tax breaks, and subsidies designed to attract more investors and developers to the Croatian solar market.

Croatia's solar market benefits from strong household adoption and public sector involvement, but unlocking the full potential of utility-scale projects requires overcoming regulatory ...

Croatia's renewable energy sector is booming. Discover how new policies and investments are helping its solar capacity surpass 1 GW by 2025, with a target of 2.5 GW by 2030.

Croatia's solar market continues to grow steadily, led by the self-supply and commercial and industrial (C& I) segments, while regulatory barriers stall utility-scale development.

RES Croatia told pv magazine that an average of 32 MW was added in each of the first six months of the year. Croatia installed a total 397 MW of solar in 2024, bringing its cumulative capacity ...

Croatia's renewable energy industry Renewable sources supply around 30% of Croatia's energy needs, but only two percent is solar energy. The potential for solar energy is estimated at ...

According to the operator, households added 8,143 power plants, and entrepreneurs 1,678. Solar power capacity is on track to overtake hydropower by 2040 It means that the number of ...

By the end of 2024, Croatia had reached 3.8 GW of installed renewable energy capacity, with solar energy

doubling its figures in one year. By 2025, photovoltaic power is expected to exceed ...

Croatia's solar capacity is on course to exceed its wind energy capacity for the first time in early 2026. With utility-scale projects facing regulatory deadlock and the end of net-metering for ...

Despite the growth in solar energy capacity, Croatia still falls behind most European Union nations in photovoltaic electricity generation, covering only about 3% of its annual energy ...

The sector added 417 MW in 2025, boosting total capacity, yet slower utility-scale roll-out and waning residential demand temper the outlook as solar approaches wind capacity.
