

Melbourne is fully covered with photovoltaic panels

A north-facing roof provides the highest solar energy yield in Melbourne, reaching up to 99.9% of maximum output, as shown in the diagram below. Panels facing north-east or north-west ...

Melbourne receives enough sunlight to make solar panels effective, with an average energy output of 4.18kWh to 4.8kWh per square meter per day, despite being further south than ...

The eight storey building, designed by Kennon, features 1182 PV panels in a facade that harvests sunlight and converts it to electricity. The solar energy is used immediately, eliminating the ...

In Melbourne, Victoria (VIC), solar adoption is rapidly growing, with over 100 small-scale solar installations contributing a total capacity of around 3,083 kW as of October 2024. This adoption ...

New modelling, on a scale ranging from individual structures through to neighbourhoods and an entire city, has shown that buildings in the City of Melbourne could provide 74% of their own ...

Use our guidance on planning permits and information on overshadowing risk to find out if solar energy will work for your building.

Transition. Recent figures from the Clean Energy Regulator (CER) reveal that by the end of 2024, the capacity of rooftop solar installations for homes and businesses had surpassed 25.3 GW, with over ...

Thousands of solar panels are going up on apartment buildings across Victoria - cutting energy bills and putting money back into the pockets of families.

An office building wrapped in a "solar skin" is being planned in West Melbourne. This futuristic structure is set to be fully reliant on solar power, and will be the first in Australia to have a ...

The most recent capacity figures may be an underestimate as PV system owners have up to a year to register their system with the Regulator, however, these figures are updated retrospectively ...
