

Coordinated by the Swedish Astronomical Society, Sweden Solar System aims to give people a feeling of the enormous distances in space, and how small the planets are compared with the Sun.

As of today, it is the only planet not represented in the Sweden Solar System. There are still plans to build a Saturn in Uppsala, and local schools have already created models of some of the...

The Sweden Solar System is the largest scale model of the Solar System in existence, and it spans the entire Swedish territory. It was created by astronomers Nils Brenning and Gösta Gahrn ...

Though Pluto's officially been downgraded to a dwarf planet, it's still hanging out in Sweden's solar system, alongside a collection of other distant celestial bodies.

Did you know that Sweden has the largest solar system model in the world? So large that it actually stretches across the entire country. There are planets, moons, dwarf planets beyond...

The Sweden Solar System is the world's largest permanent scale model of the Solar System. The Sun is represented by Avicii Arena in Stockholm (still known by most as Globen), the largest hemispherical ...

Even a few non-planets are represented in the Swedish solar system. Sedna, a trans-Neptunian object, can be found 912 km from the Globe Arena in the "Technical House" in Luleå;.

The bodies represented in this model include the Sun, the planets (and some of their moons), dwarf planets and many types of small bodies (comets, asteroids, trans-Neptunians, etc.), as well as some abstract concepts (like the Termination Shock zone). Because of the existence of many small bodies in the real Solar System, the model can always be further increased.

Conceived by scientists Nils Brenning and Gösta Gahrn and coordinated by the Swedish Astronomical Society, this intriguing project brings the vast distances of outer space down to an understandable ...
