

How many kW does a home wind turbine generate?

A typical single-family home will require a home wind turbine to generate 5 kW to meet household energy needs. To achieve this, you're looking at installing a turbine with around a 13-18 foot rotor diameter, and it will need to be placed somewhere with strong winds for most of the year.

What is a home wind turbine?

Most home wind turbines produced today are similar to those in large wind farms. They include a machine on top of a tall tower with a horizontal axis for installing three blades to rotate a rotor. Blades for home-based units are typically made of a composite material such as fiberglass instead of steel.
