

Solar photovoltaic panels or modules that are designed to be the roof, span to structural supports and have accessible/occupied space underneath shall have the panels or modules and all supporting ...

The climate zone, conditioned floor area, and possible plug loads of a building will affect its cooling demand and therefore its required solar PV system size. Section 150.1 (c)14 - PDF of the 2025 ...

Builders that intend to meet both the solar PV and solar water heating RERH specifications should detail the location and the square footage of the roof area to accommodate both technologies.

Per Section 140.10 (a) - PDF of the 2025 Energy Code, newly constructed nonresidential buildings where at least 80 percent of the floor area of the building serves one or more of the building types ...

It is intended to minimize permitting uncertainty and differing interpretation regarding specific code requirements for solar PV installations.

How much space is required between solar panels for proper mounting? You don't want your solar panels crammed together like books jammed on a shelf. They need a little breathing room. ...

The PV size shall be the smaller of a size that can be accommodated by the Effective Annual Solar Access Roof Areas, or a PV size required by the equation above, but no less than 1.5 Watt DC per ...

system that incorporates photovoltaic modules and functions as a component an integral part of the building envelope, such as roof assemblies and roof coverings, exterior wall envelopes ...

When these requirements are met, the rooftop PV installations shall not constitute an additional story or additional floor area and the building may exceed the height limit.

To comply with the prescriptive requirements the following building types are required to have a PV system installed unless the building qualifies for an exception.
