

Next Energy Technologies, a California-based company, has recently announced an innovative breakthrough in the world of solar energy with the unveiling of what they claim to be the largest fully ...

The NEXT solution empowers architects and building owners to transform traditional windows and glass facades into producers of low-cost, on-site, renewable energy for buildings, a practical and inspiring ...

NEXT Energy Technologies upgraded its pilot production line to produce 40-by 60-inch laminated transparent power-generating windows featuring its organic photovoltaic (OPV) coating and manufacturing ...

SCHOTT® Solar Glass exos features an advanced design for long-term performance in demanding space environments. Its optimized composition provides exceptional UV absorption and optical...

Discover the critical role of specialized glass in solar panel efficiency and durability. This guide breaks down the types of glass used in photovoltaic systems, industry trends, and how choosing the right materials impacts ...

NEXT OPV coatings address the three big challenges to creating a scalable solution for the commercial glass industry: aesthetics, performance and manufacturability.

SCHOTT® Solar Glass exos combines optical stability, thermal compatibility, and high scalable production to meet the requirements of next-generation space missions.

Next Energy said its laminated transparent power-generating windows were produced with its pilot production line. California-based organic photovoltaic (OPV) start-up Next Energy Technologies unveiled ...

Measuring 101.6 cm by 152.4 cm (3.3 feet x 4.9 feet), the laminated power-generating window was developed using the company's pilot production line. The new product features a transparent OPV layer...

In this article, we explore the future of renewable energy, particularly through the lens of solar glass manufacturing, and how these innovations are contributing to a sustainable energy future.
