

Beijing has constructed about 114,500 5G base stations as of April, with a density of 52 stations per 10,000 people, ranking first in China, said an official on Friday.

5G rolled out in China in 2019, and since then, more than 2.2 million 5G base stations have been built in the world's most populated country.

The capital city has realized full coverage of the 5G network in key functional areas, including its downtown core area, sub-center, and central business district.

Located in Daxing District, Beijing, the park has four data center buildings, with a total of 11,844 cabinets planned and a centralized monitoring platform for information display.

Information network infrastructure is being deployed at an accelerated pace, with nearly 150,000 5G base stations built across the city, the highest number in the country.

By the end of 2025, the number of 5G base stations in China reached 4.838 million, according to the Ministry of Industry and Information Technology. This translates to 34.4 5G base ...

- Beijing plans to deploy dense 5G-Advanced infrastructure, with 70 base stations per 10,000 residents and seamless coverage within its Fifth Ring Road, laying the foundation for a hyper ...

Beijing fulfilled full 5G network coverage in the city's key areas, such as the downtown core area, sub-center, and central business district. With every 10,000 people, China's telecom ...

Chinese operators have already deployed 114,500 5G base stations in China's capital, Beijing, as of the end of April, Chinese press reported. According to the report, Beijing had a density ...
