

Where are the most photovoltaic panels installed this year

Which country installs the most solar panels in the world?

China In 2024, China led the world--adding between 309GW and 357GW of solar capacity, which pushed its total beyond 1,000GW, roughly half the world's installed PV systems. That massive scale explains why it holds the largest number of the solar power panel installation globally, dwarfing all other countries.

Which country has the most solar PV installations in 2025?

Global solar PV installations experienced significant growth in the first half of 2025, with the total reaching 380 GW DC, a remarkable increase of 64% compared to the previous year. China dominated the market, contributing 67% of the total installations with 256 GW DC, while India and the US followed with 24 GW and 21 GW, respectively.

Which country installed the most solar panels in 2024?

China accounted for most of the growth, installing more than twice as much solar in the first half of this year as it did in early 2024. The U.S., by comparison, saw solar installations rise by just 4 percent. Through its exports of low-cost solar panels, China also drove growth in India and across much of Africa, the analysis found.

How many solar PV installations are there in China?

China's 198 GW AC solar PV additions between January and May 2025 made the country the 1st in the world to exceed 1 TW in cumulative installations. New installations of 14.36 GW AC in June this year expanded its capacity to 212.2 GW AC.

This is an extract from the 13th edition of "Snapshot of Global PV Markets" published by IEA PVPS. It provides preliminary information on how the PV market developed in 2024. Evolution of ...

8. Australia Australia now holds the 8th position in the largest number of the solar power panel installation, with around 37.8 GW of solar PV capacity installed as of late 2024. That reflects its ...

What We're Showing This treemap chart shows the state of the world's solar photovoltaic (PV) installations as of 2024, broken down by region with the top 15 countries labeled. The chart's ...

World installed 380 GW of new solar capacity in first six months of 2025 Global solar installations are on track for another record year. In the first six months of 2025, the world added 380 ...

Even as the U.S. guts support for renewable power, the world is still pushing ahead on the shift to solar energy, with installations up 64 percent in the first half of this year. Solar is the fastest ...

IEA PVPS has released its latest Trends in Photovoltaic Applications 2025 report, revealing that the world's cumulative installed PV capacity surpassed 2 260 GW by the end of 2024, marking a 29% ...

Global solar PV installations jumped 64% year-on-year (YoY) to 380 GW DC in the first half of 2025, driven

Where are the most photovoltaic panels installed this year

by China's rush to install projects ahead of the new market-based pricing ...

The continent imported 60% more solar panels from China over the past year, though a lack of reliable installation data makes it a challenge to track the true pace of deployment.

Find up-to-date statistics and facts on the global solar photovoltaic industry.

Where are the most solar panels located? Discover the countries leading the solar revolution! Learn about top regions harnessing sun's power.
