

To address this, this work presents a novel controller for managing the machine-side inverter of a single-rotor large wind turbine system using an induction machine-type generator.

Phoenix Contact provides intelligent solutions which can be used to efficiently automate sub-applications, the complete wind turbine generator (WTG), all the way to a wind farm.

With a 7 MW rated power and a 172-meter rotor, it features a medium-speed gearbox and a permanent magnet synchronous generator for optimized energy conversion, along with a full-power converter for ...

As the United States starts to reexamine the feasibility of extracting power from the wind, it is found that this ancient art can benefit from the newest of technologies, the microprocessor.

Synchronous wind, also referred to as a Type 5 WTG, offers a unique GFM solution to address grid integration and grid strength issues by keeping the grid largely synchronous at very high integration ...

Abstract This paper presents a novel maximum-power-point tracking algorithm of a vertical-axis wind-turbine (VAWT) generation system using neural network compensator on the basis ...

The Type 3 turbine, known commonly as the Doubly Fed Induction Generator (DFIG) or Doubly Fed Asynchronous Generator (DFAG), takes the Type 2 design to the next level, by adding variable ...

With a host of smart features, our Ovation WP-series controllers are engineered to optimize your wind turbine's performance and improve long-term reliability. A utility-scale wind turbine controller ...

At the National Wind Technology Center, researchers design, implement, and test advanced wind turbine controls to maximize energy extraction and reduce structural dynamic loads. ...

Next-generation wind turbine control systems are evolving with intelligent automation, predictive monitoring, and grid-aware design to drive efficiency, resilience, and sustainability in the ...
